

Main Features

Row Crop Management

Tracks crop inputs, irrigation, and yields for each planting. View what is currently planted, what was planted before and plan the next crop in one management area.

Permanent Crop Management

Keep track of Permanent Crop specific details, such as varieties, rootstocks, and the spacing of plants and rows. Quickly navigate between seasons and plan the next season's amendments.

Annual Harvest Management

At a glance view details for each harvest and year-to-date progress for the field. This makes it easy to manage crops with multiple harvests/cuttings annually, such as alfalfa.

Farming Task Management

Clear visibility of what tasks have been performed in each field and at what cost. Setup task approval and automatic archiving. Organize tasks into categories such as Tillage, Application, Labor etc.

Irrigation Management

AgNote calculates how many inches of water were applied for each planting, and how much nitrogen was applied via irrigation water or wastewater. In addition, it detects, recalculates and adjusts any overlapping wastewater irrigation.

Field Mapping

AgNote makes it easy to print or share your field maps, which are always current. The maps are automatically revised whenever you update your planting information.

What Makes AgNote Different

Planting Visibility and Planning

AgNote's **Previous, Current, Next** planting management area allows you to quickly *filter and compare your plantings*. Then, with the Batch Tool, you can *create your next crop plan in just seconds*.

Annual Harvest View

AgNote helps to visualize and manage perennial crop harvests. Annual Harvest View *displays harvests sequentially for each calendar year, along with key details for each harvest and year-to-date progress*.

Default Tasks & Invoicing

Assign default task for crop planting, applications and harvesting. As soon as you enter planted date or add input to the planting, *a new task will be created automatically*. Use *Archived Task's report for invoicing* or import into your bookkeeping software. *Assign custom bookkeeping coded for each farm*.

Dashboards

You can *customize the dashboards* for **Account, Row Crops** and **Permanent Crops**. To help farmers make sound business decisions, we also create *custom charts upon request*.

Reports

Multiple reports are available throughout AgNote, for quick download or sharing. *Reports can be scheduled in advance to be emailed automatically, with frequency chosen by the user*. *Upon request, Custom Reports can be created by us for each individual account*.
